

elipson® | Chroma Carbon

TURNTABLE

This carbon layer offers a better immunity against any vibration transmitted to the chassis

The Elipson Chroma Carbon is a belt-driven manual turntable with an elegant design and a technical chassis covered with carbon layer. Indeed, adding this layer offers a better immunity against any vibration transmitted to the chassis. Benefiting from our latest electronic and mechanical technologies, it is assembled in France in our premises.

This new turntable offers the characteristics that contributed to the success of the Omega Carbon models such as the OTT (Orbital Torsion Tonearm) tonearm in carbon equipped with the well-known Ortofon 2M Red cartridge, its digital processing system of the motor rotation. It is distinguished by a new axis system for an even more precise rotation, an improved drive motor with optimized damping, and a graduated counterweight.
